

HEALTH & SAFETY TRAININGS

Trainings in health
and safety for a more
productive, and safe
workplace.

At Hilti, we provide a wide range of health and safety trainings, tailored to your needs onsite. Our customized trainings will help in keeping construction sites safer and more productive.

We offer customized certified trainings given by our experts.
Choose the training best suited for your operations to help create awareness for your employees.

BASIC HEALTH AND SAFETY TRAINING

HOW TO SAFELY USE CHEMICALS ONSITE

WHY

Why should you take the training?

As an employee it's important to understand how to avoid accidents. It is also important to understand your obligations to assess and reduce risks onsite, and how to inform your employees of these risks.

There are several national laws and regulations which regulate risk to construction workers on the jobsite. It's the legal duty of an employer to ensure these laws are adhered to.

At Hilti we have decades of experience working onsite with our customers, all over the world, every day. We understand the dangers, challenges and solutions onsite for health and safety. Our trainers are certified with years of experience.

WHAT

What is included in the training:

Find out more about the most common injuries and effects on health on the jobsite, and how to prevent them:

Bring in preventative measures using the STOP analysis (Substitution, Technical, Organizational, and Personal protective measures)

Find out how to prevent injury onsite, including tips for protecting arms, fingers and hands, eyes, knees and ankles, heads, hearing, lungs and backs.

How to take effective action in the event of an emergency

Professional, effective and hands-on learning

WHAT

What can I take away from the training:

- Increase competence and productivity
- Reduce physical risks and insurance claims on the jobsite
- Underpin your image as an attractive employer
- Each participant receives a training certificate

Training Key Facts

Training Code	Training Venue	Duration	Content	Documents	Max No. of Participants	Trade	T&C's
2102798 - Group 2140409 - Indiv.	Jobsite or Office	8 hours (Approx.)	Theoretical, Practical and Assessment.	Certificate MERSETA Approved	10	All	1 week's notice for cancellation of training.

WHY

Why should you take the training?

Our Hilti Safe Use of Chemical Products Training gives you an overview of the short and long term risks of being exposed to chemical products on the jobsite.

Workers will learn how to protect themselves effectively from chemical hazards and get the proper training in case of an emergency. Legally compliant waste disposal of chemical products is also covered in the training.

WHAT

What is included in the training:

Find out more about how to use chemical products safely on the construction site:

- Overview of the importance and dangers of chemical products on the jobsite
- Responsibilities of employer and employee
- How to bring in preventative measures using the STOP (Substitution, Technical, Organizational, and Personal protective measures) analysis – from hazard symbols to selecting the right protective clothing
- Waste disposal and what to do in an emergency
- Professional, effective and hands-on learning

WHAT

What can I take away from the training:

- Increase competence and productivity
- Reduce physical risks and insurance claims on the jobsite
- Underpin your image as an attractive employer
- Each participant receives a training certificate

Training Key Facts

Training Code	Training Venue	Duration	Content	Documents	Max No. of Participants	Trade	T&C's
2090804 - Group 2140406 - Indiv.	Jobsite or Office	4 hours (Approx.)	Theoretical, Practical and Assessment.	Certificate	10	All	1 week's notice for cancellation of training

THE IMPORTANCE OF HEALTH AND SAFETY FOR EVERY COMPANY

1

Minimizing Hazards

Potential hazards are rampant in almost every workplace environment. Equipment, chemicals, certain behaviors and activities, can potentially cause injury or harm to you or your workers. Staying up to date with the trainings can help minimize many hazards onsite.

2

Staying Up to Date

Training is important and effective, as it will educate your employees on proper workplace procedures, practices, and behavior to help prevent possible injuries and accidents.

3

Avoiding Liabilities

Without proper health and safety trainings, the company might face many setbacks such as employee liabilities, legal implications, disruption of work, loss of credibility with clients, and higher insurance premiums.

STAYING SAFE DURING DRILLING AND DEMOLITION

WORKING WITH ANGLE GRINDERS

WHY

Why should you take the training?

Drilling and Demolition hammers can be found at many sites. The usage of these everyday tools can result in a number of dangers and health risks which are perhaps not obvious at first glance. There are a number of risks when working with drilling and demolition hammers on the construction site – these include recoil, electric shock, vibration and dust.

Our Hilti Drilling & Demolition Safety Training gives you an overview of the risks caused by using drilling and demolition devices, and how to help prevent them.

WHAT

What is included in the training:

- Find out more about how to use drilling and demolition tools safely on the construction site:
- Overview of the safety features of drilling and chisel hammers
- Potential hazards of using drilling and chisel hammers on the jobsite
- How to bring in preventative measures using the STOP (Substitution, Technical, Organizational, and Personal protective measures) analysis
- How to take effective action in the event of an emergency
- Professional, effective and hands-on learning

WHAT

What can I take away from the training:

- Increase competence and productivity
- Reduce physicalUnderpin your image as an attractive employer
- Risks and insurance claims on the jobsite
- Each participant receives a training certificate
